

In this essay I am going to be arguing in favour of killing cane toads. I have read many articles which have persuaded that the aretues are nasty. I will also be considering those argument in support of these pests. however the overall view is that thay must die

from reading articles, I have found that cane toads are a nusence which need to be exbrminated as thay kill too many natire Anstralian speaes.

Cane toads were brought to Australia in 1935 to kill can beetles and prdest cane sugar. This didnt work and they quickly grew in number

Why are they pests? They breed very quickly. Johnathan pearlman says; "A single clutch laid by a cane toads can contain more than 30,000 eggs - three times as many as natire toads". (pearlman 2012)

It was hard to find people who supported cane toads. A lot of people did come up with nicer ways to kill them. The RSPCA say that you could paralyse them with cream and then, "... put them in a freezer and the job is done." (Mrcer, 2006)

Even though killing animals is not nice, my research has told me that it is the only way to stop cane toads.

Phil Mercer (2006), 'Australia's hunt down toxic toads', BBC news, Darwin, (18/03/2006)

Jonathan pearlman, (2012), Australia

Scientists use can toads own poison against  
itself. The Telegraph, (13106/12).
